

bondpad

From Magic research & development activity comes the second generation of Bondpad products, an eco-sustainable food pad containing an ecological absorbing core.

Next generation food pad

The upper layer, obtained through the combination of hot-bonding and hot-drilling processes, guarantees a perfect and immediate drainage of the liquid released by the packaged food, then preserving its freshness and increasing its shelf-life.

In addition, the embossing process allows a significant reduction in the product thickness while maintaining the same absorption of traditional pads.

- Wide choice of **sizes** (cut, shaped and in rolls)
- Top films in a **wide range** of colours
- **Absorption** capacities **from 800 to 8000 gr/sqm** (0,2% saline solution)

Next generation food pad

Now with **Airgel**
by Spongel

- greener
- more absorbent

From **Magic** continuous path of innovation and investment takes form **Airgel**, an **eco-friendly airlaid** that, unlike all the others on the market, does **not contain any chemical absorbing additive** and ensures the same performance levels.

The **new super absorbent core** is mainly composed of cellulose, a minimum percentage of bicomponent fibres and, above all, contains **Spongel, Magic** patented **super absorbent biodegradable powder** resulting from a long and assiduous research & development internal activity.

Most of **Airgel** is therefore biodegradable and made of materials from renewable sources.

- No absorbing chemical additives
- High performance
- Great quality/price ratio
- Highest absorbing performance with reduced material thickness
- Highly technological and worldwide exclusive cellulose based raw material
