

# perfopad

From Magic research & development activity comes the second generation of Perfopad products, an eco-sustainable food pad containing an ecological absorbing core.

## Next generation food pad

The surface drilling allows direct absorption towards the inner core and helps in improving the presentation of the packaged product.

The absorption of the liquid released by the food prevents bacterial growth, keeps the product fresh for longer and helps in reducing food wastage.

- Wide choice of **sizes** (cut, shaped and in rolls)
- Top films in a **wide range** of colours
- **Absorption** capacities **from 800 to 6000 gr/sqm** (0,2% saline solution)

**BRCS**  
Packaging and  
Packaging Materials  
CERTIFICATED

**MAGIC**  
absorbing your needs

## Next generation food pad

Now with **Airgel**  
by Spongel

- greener
- more absorbent

From **Magic** continuous path of innovation and investment takes form **Airgel**, an **eco-friendly airlaid** that, unlike all the others on the market, does **not contain any chemical absorbing additive** and ensures the same performance levels.

The **new super absorbent core** is mainly composed of cellulose, a minimum percentage of bicomponent fibres and, above all, contains **Spongel, Magic** patented **super absorbent biodegradable powder** resulting from a long and assiduous research & development internal activity.

Most of **Airgel** is therefore biodegradable and made of materials from renewable sources.

- No absorbing chemical additives
- High performance
- Great quality/price ratio
- Highest absorbing performance with reduced material thickness
- Highly technological and worldwide exclusive cellulose based raw material
